Order from SLA \$1.60 61-20774

Trans. of Dohányipar (Hungary) 1959, v. 1, no. 1,  
p. 1-7.

DESCRIPTORS: \*Tobacco, \*Plants, Growth.

The article contains the main external characteristics of the individual "hands" (i. e., leaf groups) both in the order of position on the stalk and classified in terms of the characteristics. The most important of these characteristics are: (a) the shape and the contour of the leaf, (b) the surface of the leaf (its undulations, texture-feel, aroma hairs), and (c) the color of the leaf and its distribution on the leaf body. p. 330-336.

The (atmospheric) heat advection from the Atlantic  
Ocean into the Central Arctic is discussed in connection  
with changes in synoptic conditions. The phenomena  
are illustrated with graphs based on observational data  
gathered by scientific drifting stations in the polar  
region and by permanent stations located on Spitzbergen  
and Franz Josef Land. (Navy Hydrographic Office

Determinations of glutamic-alanine transaminase ac-  
tivity and serum iron are valuable laboratory tests in  
the diagnosis of Botkin's disease. The determination of  
glutamic-aspartic transaminase activity is less expedi-  
ent for this purpose. The diagnostic value of glutamic-  
alanine transaminase determinations in Botkin's disease  
is reduced because positive results are often obtained
